

YOUR PARTNER IN SUPPLY CHAIN AND LOGISTICS ENGINEERING

HPMLOG DEVELOPS SOLUTIONS FOR YOUR LOGISTICS

COMPANY FACTS

- Established 1998
- International consulting activities
- Planning in Hamburg and expert know-how on site
- Owner managed and independent of manufacturers and other institutions

APPROACH OF CONSULTING

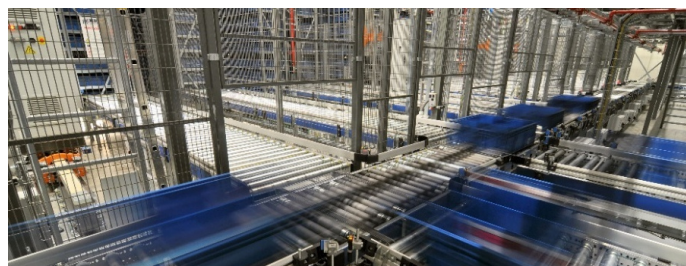

- Individual solutions to customer needs
- Systematic, structured, tool-supported
- Close cooperation with customer teams
→ acceptance
- Realisation and result-oriented

CONSULTING, PLANNING, REALISATION

SUPPLY CHAIN CONSULTING

- Stock management
- Supply concept
- Network planning
- Organisation & Structure
- In- & Outsourcing
- Change Management

LOGISTICS ENGINEERING

- Operational concepts
- Material flow solutions
- Warehouse planning
- Factory planning
- Master- & General planning
- Realisation management

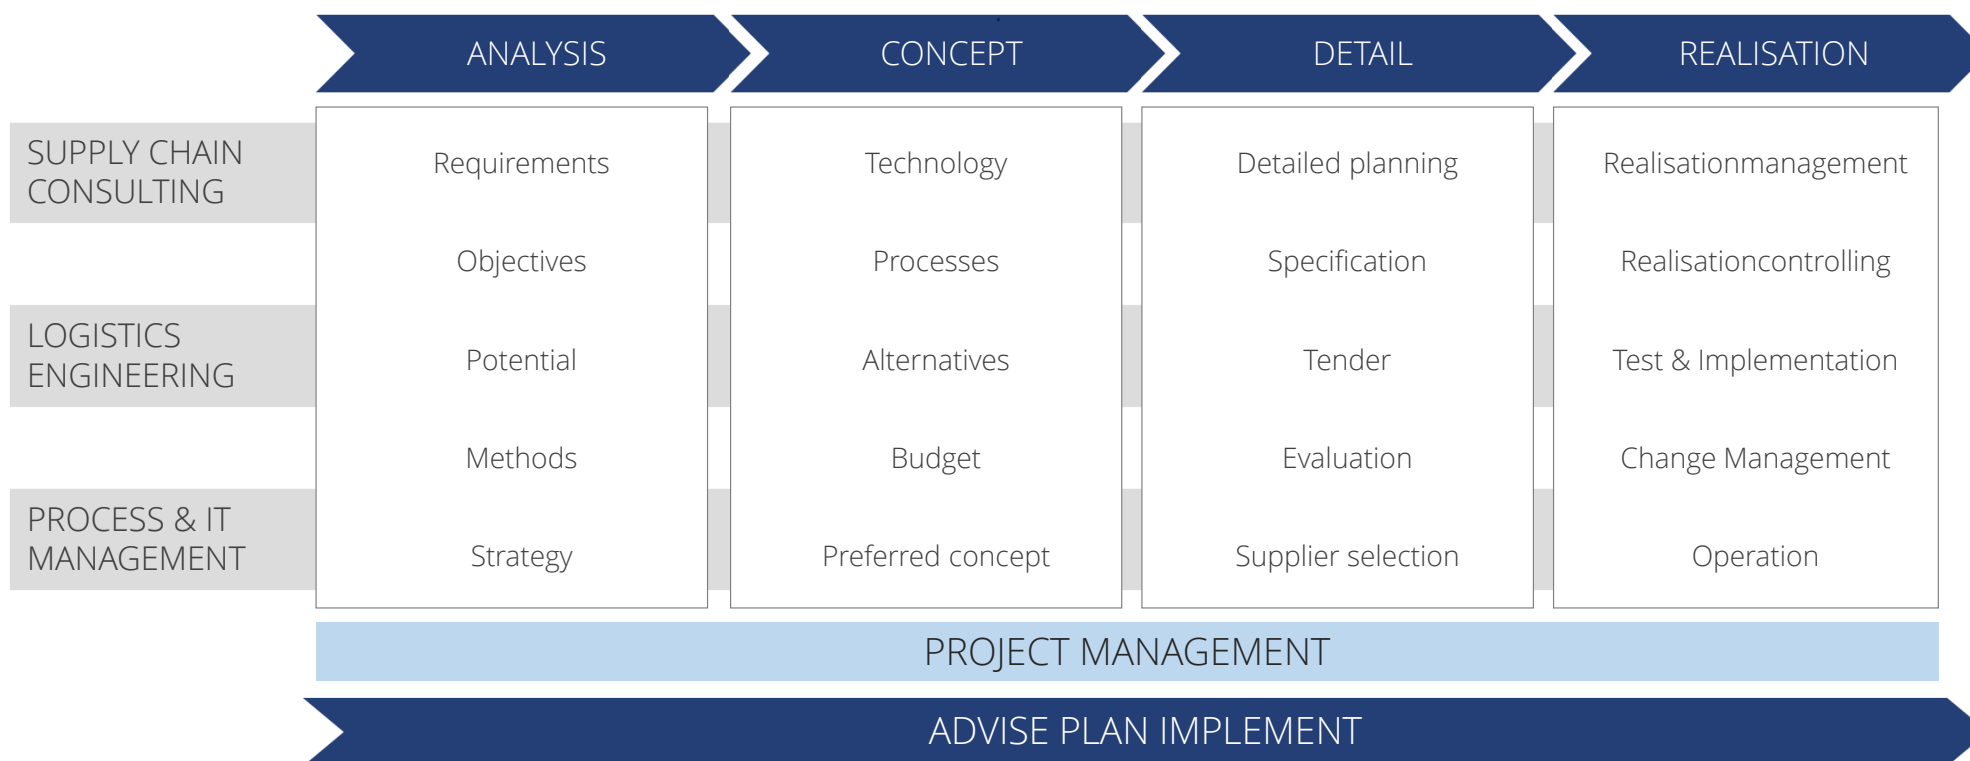

PROCESS & IT MANAGEMENT

- Process Design
- IT-Architecture
- Functional specification
- Process simulation
- Test management
- Migration management

OUR PROCEDURE

OUR SYSTEMATIC APPROACH ENSURES QUALITY AND RELIABLE RESULTS

- Goal-oriented

- Structured & Methodology

- Experiences

INDIVIDUAL SOLUTIONS FOR YOUR INDUSTRY

OUR INDUSTRY COMPETENCIES

MACHINERY & EQUIPMENT

Technical progress in manufacturing and new products assume a constant optimization of plant layout as well as the development of cross-functional production networks. Specialization and adaptation of the vertical range of manufacture not only demand changes in layout, but often also new supply and staging strategies.

RETAIL & E-COMMERCE

The market transparency provided by the Internet has stepped up competition. Consequently, customer service has become a decisive competitive factor. The driver of service is logistics. Increasing competition is impacting both stationary over-the-counter trade as well as the burgeoning e-commerce business. It is becoming increasingly difficult to separate the two. Individual branches of trade such as fashion face particular challenges in the handling of their returns.

FOOD & BEVERAGE

Producers have to weigh the balance between strict requirements at affordable prices from the standpoint of trade and at the same time meet stricter standards in production. The current trend to healthy, vital nutrition has resulted in a need for quality changes (HACCP) in the production process and production environment. Standards which in the past were applied in life science & pharmaceutical companies are increasingly part of the expansion of production facilities and new plans in the industry.

OUR INDUSTRY COMPETENCIES

CONSUME GOODS

International production networks and supply chains that integrate the customer are already a reality at leading consumer goods manufacturers. However, they are subject to the dynamics of market changes, product modifications and realignment of corporate strategy due to a change in the terms of reference.

SPARE PARTS

The challenge in the spare parts business is to improve the service level and guarantee the availability of parts worldwide despite the constantly increasing diversity of parts. Efforts of companies to provide a specific level of service and parts availability are rewarded in the service and spares business where margins are greatest. Good spare parts management also ensures customer loyalty to the company and sustainable market shares.

LIFE SCIENCE & PHARMA

Logistics in the pharmaceuticals industry is characterized by a demand for excellent hygiene and the uninterrupted and total traceability of goods along the entire procurement, production and distribution process. Automation as well as differentiated and customer-specific products offer new challenges for supply chains and production processes moving toward the era of digitalization.

OUR INDUSTRY COMPETENCIES

LOGISTICS SERVICE PROVIDER

The decision to outsource a project has a major impact on a company and is only successful if it is absolutely clear what the existing processes and requirements are as well as the mutual expectations are. It must be clear both to the company that has requested a quotation as well as also to the service provider submitting a proposal and the processes and requirements must be mutually settled by agreement. Reliable, long-term cooperation can only be undertaken and function on equal footing.

PUBLIC SECTOR

Successful industrial development also includes the development of a logistics infrastructure. This can include industrial parks, the development and expansion of freight centres or the development of business and logistics parks. We also develop the integrated city logistics concept for supply and disposal models for residential, office and selling spaces for new urban developments.

OTHER INDUSTRIES

The project practice shows that the transfer of "best practices" between companies in different industries leads to successful logistics solutions. HPMlog has extensive industry specific experience. Lateral thinking, methods, knowledge and a sound technical experience are the toolbox for successful solutions along the entire supply chain and in different sectors and industries.
